

Sequence of Events — Completed Example

Task: Plant a bean seed · Each box records one necessary stage in order, with transition words that make the sequence explicit.

1 · FIRST

Fill a small pot with damp potting mix, leaving a little space below the rim.

2 · NEXT

Make a hole about 1 inch deep and place one bean seed inside.

3 · THEN

Cover the seed loosely with soil and water gently so the soil is moist, not flooded.

4 · AFTER THAT

Place the pot where it will get suitable light and check the soil each day.

5 · FINALLY

When the seedling emerges, keep giving it light and water when the top soil begins to dry.
